Self Driver Checkin Unilever

- Developed the Self Driver Check-In application to streamline the **check-in process** for drivers using smartphones, tablets, and laptops. We used technologies like **Reacjs, Nestjs, redux, SQL server, ID scan, azure functions, WebSockets, and schedulers**.
- Implemented cutting-edge technology to enable validators to verify driver details for accuracy upon entry and exit from the facility.
- Enabled validators to access **real-time status updates** of drivers performing check-in/check-out procedures.
- Transformed traditional paper check-in logs into an **efficient digital system**, enhancing the overall check-in experience for truck drivers.

22 Months

Unilever BY Reports

- The project aims to develop a user-friendly website for managing **warehouse management systems** using **Reactjs and .net**
- The website will have a fast and efficient interface to help users easily run queries and access data from the database.
- Additionally, users can export the data into Excel files for their convenience.
- I worked on this project in Appwrk It Solutions.

4 Months

Unilever Boiler Hub

- Boiler Hub is a portal that provides a data fetching and processing platform based on **React** and **NestJS** user-friendly **charts** are implemented in the portal for better data visualization.
- It is a faster, quicker, and more efficient portal where charts are used for better UI purposes.
- I worked on this project in Appwrk It Solutions.

2 Months

Mesha

- Mesha enables users to manage all of their **financial operations** in one place.
- With Mesha, users can easily make **worldwide payments, set reminders for upcoming payments, exchange tokens, and conduct cryptocurrency transactions**. With this web application, users can utilize a single dashboard for managing business operations across various countries, banks, and service providers more quickly and easily.
- I worked on this project in Appwrk It Solutions.
